

INTRODUCING

# POWERBAND™

Variable Wattage Technology

## USING POWERBAND™

The i-PAR 38 lamp has three power level settings. These settings are indicated by numbers molded onto the plastic neck of the lamp assembly, and are selected by removing and adjusting the position of a plastic power ring supplied with the lamp. The i-PAR 38 lamp is factory shipped with setting 2 (12 Watts) enabled.

Turn the power ring so that the **indexing mark** aligns with the wattage setting to be selected.
